Regional Sewerage Program Technical Committee Meeting

AGENDA
Thursday, September 24, 2015
4:00 p.m.

Location
Inland Empire Utilities Agency
6075 Kimball Avenue
Chino, CA 91708

Thursday, September 24, 2015

Call to Order and Roll Call

1. Approval of Minutes
   A. Minutes of July 30, 2015 Meeting

2. Action Items
   A. Recycled Water Policy Principles (Written)

3. Informational Items
   A. Service to Unincorporated Area of San Bernardino County
      (Written/PowerPoint)
   B. Recycled Water Semi-Annual Update (PowerPoint)
   C. Energy Management Program (Written/PowerPoint)
   D. Conservation Program Update (PowerPoint)

4. Receive and File
   A. Building Activity Report (YTD)
   B. Recycled Water Distribution - Operations Summary
   C. Long Range Plan – Finance

5. Other Business
   A. IEUA General Manager’s Update – Regional Contract Extension
      Negotiations
   B. Committee Member Requested Agenda Items for Next Meeting
   C. Committee Member Comments
   D. Next Meeting – October 29, 2015

6. Adjournment
DECLARATION OF POSTING

I, Jill Kiefer, Executive Assistant of the Inland Empire Utilities Agency, A Municipal Water District, hereby certify that a copy of this agenda has been posted by 5:30 p.m. in the foyer at the Agency’s main office, 6075 Kimball Avenue, Building A, Chino, CA on Monday, September 21, 2015.

Jill Kiefer
Regional Sewerage Program
Technical Committee Meeting

MINUTES OF JULY 30, 2015 MEETING

CALL TO ORDER
A regular meeting of the IEUA/Regional Sewerage Program – Technical Committee was held on Thursday, July 30, 2015, at the Inland Empire Utilities Agency located at 6075 Kimball Avenue, Chino, California. Ryan Shaw, City of Ontario, called the meeting to order at 4:05 p.m.

New Hire Introduction: Mr. P. Joseph Grindstaff, General Manager/IEUA, introduced Jill Kiefer, Executive Assistant, who started with the Agency on June 22, 2015.

1. APPROVAL OF MINUTES
   A. Minutes of April 30, 2015 Meeting

   Motion: By Braden Yu/Cucamonga Valley Water District and seconded by Mike Hudson/City of Montclair to approve the minutes of the April 30, 2015 Technical Committee meeting.

   Motion carried: Unanimously.

2. ACTION ITEMS
   None.

*Jesus Plasencia entered the room at 4:10 p.m.

3. INFORMATIONAL ITEMS
   A. Regional Pretreatment Program – Local Limits Update
      Craig Proctor/IEUA gave a presentation on the Agency’s Regional Pretreatment Program and the Local Limits limits for Significant Industrial Users (SIUs). In 2013 the Regional Water Quality Control Board (RWQCB) required the Agency to reevaluate its local limits in a formal study as a result of a Pretreatment Compliance Audit. On May 21, 2014, the Agency retained Arcadis U.S. Inc. to provide consulting services to reevaluate and develop local limits that would be applicable to all SIUs within the Agency’s service area. Based on screening criteria, data evaluation, and EPA guidance documents, the consultant determined there were 29 potential pollutants of concern (POCs). Pretreatment staff will be submitting the local limits report to the RWQCB. If the proposed local limits are approved by the RWQCB, staff will present to the Regional Technical Committee in November. Upon review with the Committee, staff will recommend the Board adopt a Notice of Intent to revise the local limits and set a public hearing for adoption of the local limits at the December Board meeting.

   B. Odor Study Update
      Jesse Pompa/IEUA gave an overview of an Odor Study conducted quarterly over a 12-month period. Strategic sampling was performed, primarily along treatment plant fence lines, by a panel of Agency members and a third-party testing agency. An “odor wheel” was used to identify potential odor descriptors. Future efforts will focus on RP-1 where the level of odors varied each quarter, but was intense where the primary effluent is stored. Chris Berch/IEUA thanked the Agency members for sending their staff to participate on the panel.

   C. Water Conservation Update
      Lisa Morgan-Perales/IEUA gave an update on the various conservation programs in place, including the MWD Turf Removal Program and Rebate Programs. Due to the high volume of applications, the MWD’s turf removal program has been put on hold and a waiting list is in place. Between May 4 and July 30, IEUA received 1,700 residential applications, 700 which have been approved. 1000 are on hold.

      Ms. Morgan-Perales also discussed OmniEarth, a program used to monitor geographical water usage. Tom Ash/IEUA is working with Chino Hills, Upland, MVWD, and Ontario to execute Non-
Disclosure Agreements so that OmniEarth can establish databases and develop dashboards to look at customers’ efficiency standards. This will help when reporting to the State Water Resources Control Board (SWRCB).

Other conservation topics covered by Ms. Morgan-Perales included an agricultural drought assistance program being developed by Tom Ash, and the SAWPA Prop. 84 grant. IEUA’s agreement for Prop. 84 funding was executed on July 20, and will go to the Board for adoption/approval in December.

D. Regional Contract Audit Review Update
Teresa Velarde, Manager of Internal Audit/IEUA, via telephone, presented the findings of the Regional Contract Audit. At the podium were Peter Soelter and Sapna Nangia, Senior Internal Auditors with IEUA, assisting with the slide presentation.

Ms. Velarde stated that the purpose of this update is to provide the results of the Regional Contract Review. In early 2014, the IEUA Board requested a comprehensive evaluation to determine how each of the member agencies applied the Regional Contract within their agency.

This review is more comprehensive and detailed than the previously conducted audits, and looks closely at public service facilities, which had not been looked at before. To date, Internal Audit has issued approximately ten audit reports with over twenty (20) recommendations or suggestions for improvements.

In reference to the methodology of the review, Ms. Velarde said that the auditors selected items for review where errors and mistakes were likely to occur. The auditors were looking to see if Connection Fees and Monthly Volumetric Fees were being assessed and reported according to the requirements of the current Regional Contract.

Public service facilities such as hospitals, schools, colleges, government facilities, etc. are required to pay Connection Fees as well as monthly sewer fees. However, there is no consistent process in place to identify and collect from these facilities because they go through a different type of permitting process.

Peter Soelter, Senior Auditor/IEUA, explained how the auditors identified the public facilities in the region. The process consisted of inquiring of the member agencies, physical observation, and researching State websites. Public facilities that had new construction activity during and around the audit period were identified.

Ms. Velarde continued her presentation by explaining that certain facilities were tested to determine if Connection Fees are being charged correctly. The auditors found that there are inconsistencies as to how customers/entities are/should be categorized per Exhibit J of the Regional Contract. As a result, there is a lack of consistency in the assessment and collection of fees among the member agencies.
The next steps of the Internal Audit Department are to finalize the individual audit reports and provide a final comprehensive review with recommendations to assist in the renegotiation of the Regional Contract. Ms. Velarde then concluded her presentation by opening the floor for questions and comments.

Braden Yu/Cucamonga Valley Water District inquired about the facilities that were chosen for review, and whether or not they were chosen randomly. Ms. Velarde responded that, since this study was not for research purposes, some of the businesses/entities selected were intentionally chosen based whether there were likely to be errors. Mr. Yu stated that, since this is a public meeting, the report should not have specifically named each agency. Mr. P. Joseph Grindstaff, General Manager/IEUA, addressed and acknowledged Mr. Yu’s concern, and stated that the intent is for the finance officers of each member agency to look at the questioned costs and see what needs to be done. Also, in moving forward with the Regional Contract, the discrepancies between the agencies should be addressed. Again, Mr. Yu stated that the presentation was very pointed. Tony Mata/City of Fontana suggested providing a more generalized report in the future. Ms. Velarde acknowledged the concerns and stated that the results are for their own knowledge and information so that the team understands and addresses the issues, and can begin to move forward.

Mike Hudson/City of Montclair, suggested that IEUA collect the Connection Fees for the region going forward to prevent any discrepancies. He cited the previous EDU audit that highlighted errors made three years ago, and the inability of his agency to collect the additional fees. He stated that his agency does not have the manpower to check work at schools and hospitals on a monthly basis. Also, the fee assessment is a judgment made “at the counter.” There is no process to go back and collect if there is an error. Ms. Velarde responded that these items are identified in the audit review, along with ideas and recommendations that will be presented at a future meeting.

There was further extensive discussion among the committee members regarding future meetings with finance executives from the member agencies, nuances among the different agencies, how to deal with errors in the future, and providing common forms and consistent training.

Mr. Grindstaff stated the Board of Directors would like to see staff address all the issues identified during the audit. He said the auditors would come back in 3-6 months with recommendations as to how to move forward. He also expressed the value and importance of internal auditors, and shared his appreciation for Ms. Velarde and her staff.

4. RECEIVE AND FILE ITEMS
   A. Draft Minutes of the Pretreatment Committee
   The Draft Minutes of the Pretreatment Committee were received and filed by the Committee.

   B. Building Activity Report (YTD)
   The Building Activity Report (YTD) was received and filed by the Committee.
C. **Recycled Water Operations Summary**  
The Recycled Water Operations Summary was received and filed by the Committee.

D. **Draft Special Joint Workshop Agenda**  
The Draft Special Joint Workshop Agenda was received and filed by the Committee.

E. **Recycled Water Program Strategy**  
The Recycled Water Program Strategy was received and filed by the Committee.

F. **Wastewater Facilities Master Plan**  
The Wastewater Facilities Master Plan was received and filed by the Committee.

5. **OTHER BUSINESS**

A. **IEUA General Manager’s Update**  
Mr. P. Joseph Grindstaff had two issues for comment:

1. The State Board released their conservation review, and the statewide objective for water conservation was met at 27%.

2. There is a great opportunity to obtain recycled water grants. If there are any projects for which you would like a grant, you must submit package by 12/2/15. The grant is for a 35% principal forgiveness along with a 1% loan.

B. **Committee Member Requested Agenda Items for Next Meeting**  
None.

C. **Committee Member Comments**  
None.

D. **Next Meeting – August 27, 2015**

6. **ADJOURNMENT** - Meeting was adjourned at 5:35 p.m.

Transcribed by:  
Jill Kiener  
Executive Assistant, IEUA
Date: September 24, 2015

To: Regional Technical Committee

From: Inland Empire Utilities Agency

Subject: Recycled Water Policy Principles

RECOMMENDATION

It is recommended that the Regional Technical Committee review and provide recommendations for the adoption of the Recycled Water Policy Principles.

BACKGROUND

The Inland Empire Utilities Agency (IEUA) and its contracting agencies have developed a successful regional Recycled Water Program for both direct use and groundwater recharge. In 2000, the region identified that recycled water use was a critical component in drought-proofing and maintaining its economic growth. With imported water rates increasing and long-term imported supply reliability in decline, the region committed to aggressively and proactively develop local water supplies to offset these impacts. This set the path for the development of a regional recycled water distribution system.

While the foundational commitment to beneficial reuse of recycled water have remain unchanged, some fundamental concepts have been questioned over the past few years, which has resulted in the region working together to develop Recycled Water Policy Principles to address the changes since the inception of the program. The region’s goal to maximize the beneficial use of recycled water has not changed. However, the commitment to connect additional recycled water users has stagnated over the past few years. At this time, several contracting agencies are struggling with the inherent conflict between use in excess of “base entitlement” (as defined by the Regional Sewage Service Contract) and the prioritization of direct use over groundwater recharge. The struggle has led some contracting agencies to be concerned about their local benefit and perceived inequities.

In order to move forward together as a region, it is appropriate to reevaluate and affirm the regional Recycled Water (RW) Policy Principles prior to implementing any remaining significant system improvements to the Recycled Water Program and to clarify how these principles will govern the future benefits received by all IEUA contracting agencies. The proposed RW Policy Principles are summarized below and provided in the attachment in detail.
Recycled Water Policy Principles

1. **Maximize the beneficial use of recycled water to enhance local water resource availability and reduce reliance on imported water.**
   
   1. IEUA will continue the development of the Regional Recycled Water infrastructure by providing equitable access for the contracting agencies to achieve reuse of 50,000 AF/year by 2025.
   
   2. IEUA will pursue the long term acquisition of recycled water from out of service area sources to supplement the regional supply.

2. **Promote efficient application and use of recycled water as a reliable and fundamental component of drought-proofing the IEUA service area.**
   
   1. Ensure efficient use of recycled water at the point of use, consistent with rules and expectations of responsible potable water use.

3. **The regional recycled water system will be operated based on the following priorities for recycled water deliveries:**
   
   1. Regional discharge obligations (Santa Ana Judgment, environmental obligations, etc.),
   
   2. Contracting agency base entitlement use,
   
   3. Regional groundwater recharge and
   
   4. Contracting agency use above entitlement.
      
      i. Acquisition of another contracting agency’s unused base entitlement or provide for the reallocation of equivalent value to contracting agencies

4. **Meet peak recycled water direct demands through coordinated demand management of recycled water deliveries.**
   
   1. Large users will have pressure sustaining valves to ensure that overall regional demands are reliably met.

5. **Maintain a financially viable recycled water program with rates that incentivize use of all available recycled water and that provides funding to achieve full cost-of-service for the recycled water program.**
   
   1. Set recycled water rates that cover the full cost of Operations & Maintenance (O&M) and Rehabilitation & Replacement (R&R) for the system.

6. **Maximize the use of recycled water capital investments made by IEUA and its contracting agencies with recycled water use within the region.**
   
   1. Retail contracting agencies shall substantially fulfill prior recycled water connection commitments for all existing infrastructure.
   
   2. Firm contracting agency commitments for recycled water use will drive new regional investments.

**ATTACHMENTS: RW Policy Principles**
DRAFT RECYCLED WATER POLICY PRINCIPLES

Introduction
The Inland Empire Utilities Agency (IEUA) and its contracting agencies have developed a successful regional Recycled Water Program for both direct use and groundwater recharge. As the Program continues to advance, it is important to summarize the history, operating philosophies, and policy principles on which the Program was founded.

In 2000, the region identified that recycled water use was a critical component in drought-proofing and maintaining its economic growth. With imported water rates increasing and long-term imported supply reliability in decline, the region committed to aggressively and proactively develop local water supplies to offset these impacts. This set the path for the development of a regional recycled water distribution system and a Recycled Water Implementation Plan.

The use of recycled water presented several advantages to the region: it is one of the most significant and underutilized sources of local water supply; it is reliable during drought and climate change conditions; and it requires significantly less energy than imported water to deliver to customers thus reduces greenhouse gas emissions. The development of recycled water is the cornerstone of a larger regional initiative to improve water supply reliability through enhanced local supplies. IEUA, in partnership with its contracting agencies and Chino Basin Watermaster (CBWM), invested over $600 million over the last fifteen years in water recycling, conservation, recharge improvements, the MWD groundwater storage and recovery project, the Chino Desalter, and other water management programs. These programs collectively reduce the region's need for imported water especially during drought or conditions when imported water supplies are not available. In addition to the region switching large potable water users to recycled water, IEUA and CBWM obtained a landmark permit in 2005 for groundwater recharge using IEUA's high-quality recycled water.

By 2007, Southern California was experiencing one of its driest years with the potential for entering an extended drought period. The State of California subsequently made water recycling an important element of California's water supply policy and adopted a statewide goal of achieving 1,000,000 acre-feet (AF) of reuse by 2010. In response, in November 2007 IEUA and its contracting agencies unanimously adopted and committed to implement the Three Year Recycled Water Business Plan which laid out a focused and cost-effective approach to rapidly expand the availability and use of recycled water within IEUA's service area.

By 2014, over $250 million has been invested into the implementation of a robust Recycled Water Program. The region has achieved Program success by leveraging heavily on grant funding and loans. With unanimous regional support, annual recycled water use grew from approximately 5,000 AF in FY 04/05 to over 38,500 AF in FY 13/14. Critical to the economical and efficient operation of the system, each contracting agency made commitments to complete initiatives with the goal to increase direct reuse within their service areas. While some contracting agencies accomplished or far exceeded their local goals, some contracting agencies have not been able to fully achieve their original commitments.
The region’s goal to maximize the beneficial use of recycled water has not changed. However, the commitment to connect additional recycled water users has stagnated over the past few years. At this time, several contracting agencies are struggling with the inherent conflict between use in excess of “base entitlement” (as defined by the Regional Sewage Service Contract) and the prioritization of direct use over groundwater recharge. The struggle has led some contracting agencies to be concerned about their local benefit and perceived inequities.

In order to move forward together as a region, it is appropriate that we reevaluate and affirm the regional Recycled Water Policy Principles prior to implementing any remaining significant system improvements to the Recycled Water Program and to clarify how these principles will govern the future benefits received by all IEUA contracting agencies.

**Draft Recycled Water Policy Principles**

1. **Maximize the beneficial use of recycled water to enhance local water resource availability and reduce reliance on imported water.**
   
   1. IEUA will continue the development of the Regional Recycled Water infrastructure by providing equitable access for the contracting agencies to achieve reuse of 50,000 AF/year by 2025.
   
   2. IEUA will pursue the long term acquisition of recycled water from out of service area sources to supplement the regional supply.

2. **Promote efficient application and use of recycled water as a reliable and fundamental component of drought-proofing the IEUA service area.**

   1. Ensure efficient use of recycled water at the point of use, consistent with rules and expectations of responsible potable water use.

3. **The regional recycled water system will be operated based on the following priorities for recycled water deliveries:**

   1. Regional discharge obligations (Santa Ana Judgment, environmental obligations, etc.),
   
   2. Contracting agency base entitlement use,
   
   3. Regional groundwater recharge and
   
   4. Contracting agency use above entitlement.

      i. Acquisition of another contracting agency’s unused base entitlement or provide for the reallocation of equivalent value to contracting agencies

4. **Meet peak recycled water direct demands through coordinated demand management of recycled water deliveries.**

   1. Large users will have pressure sustaining valves to ensure that overall regional demands are reliably met.
5. Maintain a financially viable recycled water program with rates that incentivize use of all available recycled water and that provides funding to achieve full cost-of-service for the recycled water program.

   1. Set recycled water rates that cover the full cost of Operations & Maintenance (O&M) and Rehabilitation & Replacement (R&R) for the system.

6. Maximize the use of recycled water capital investments made by IEUA and its contracting agencies with recycled water use within the region.

   1. Retail contracting agencies shall substantially fulfill prior recycled water connection commitments for all existing infrastructure.

   2. Firm contracting agency commitments for recycled water use will drive new regional investments.
Date: September 24, 2015
To: Regional Technical Committee
From: Inland Empire Utilities Agency
Subject: Service to Unincorporated Area of San Bernardino County

RECOMMENDATION

This is an Informational Item for the Regional Technical Committee to review.

BACKGROUND

This item was presented at the IEUA Board of Directors meeting on August 19, 2015.

All referenced agreements and Memorandum of Understanding may be accessed at the IEUA website under the section labeled, “August 19, 2015 Board of Directors Meeting – Part 2.”
Date: August 19, 2015

To: The Honorable Board of Directors

Through: Engineering, Operations, and Biosolids Management Committee (8/12/15)
Public, Legislative Affairs, and Water Resources Committee (8/12/15)
Finance, Legal, and Administration Committee (8/12/15)

From: P. Joseph Grindstaff
General Manager

Submitted by: Chris Berch
Executive Manager of Engineering/Assistant General Manager

Sylvie Lee
Manager of Planning and Environmental Resources

Subject: Service to Unincorporated Area of San Bernardino County

RECOMMENDATION

It is recommended that the Board of Directors:

1. Approve the agreements with California Steel Industries, Auto Club Speedway, Prologis, City of Fontana and Fontana Water Company to provide wastewater and recycled water services to a portion of the unincorporated area of San Bernardino County; and

2. Authorize the General Manager, subject to non-substantial changes, to execute agreements.

BACKGROUND

Auto Club Speedway (Speedway), California Steel Industries (CSI), and Prologis are located in the unincorporated area of San Bernardino County within the Inland Empire Utilities Agency (IEUA) service area. Domestic sewage generated from Speedway, CSI, Prologis and several surrounding properties is currently treated at the Prologis wastewater treatment plant located adjacent to IEUA’s San Bernardino Avenue Lift Station (SBALS). Since the treatment plant is an aging facility that will require significant and costly capital upgrades in the near future, Speedway, CSI and Prologis intend to decommission the wastewater treatment plant and utilize permanent wastewater treatment services through IEUA. The City of Fontana (Fontana) would be the retail service provider to these properties. As the retail service provider, Fontana will collect wastewater fees and provide payment to IEUA in accordance with the Regional Contract.
In addition to the wastewater service, IEUA will provide Speedway and CSI recycled water for irrigation and industrial use through Fontana Water Company. Recycled water use (reduced groundwater pumping) at these sites will provide significant benefit to the Chino Basin Groundwater Management Zone No. 3 (MZ-3).

**Project Activities**

If approved, within ninety (90) days of the execution of the agreements, IEUA will design, construct and fund a temporary system to divert all flows currently treated at the Prologis wastewater treatment plant to the IEUA’s SBALS. IEUA will fund the design and construction of the permanent system through connection fees and reimbursement from Speedway, CSI and Prologis.

The recycled water system will be constructed following the Public Utilities Commission’s approval of the proposed recycled water rates for Speedway and CSI. The proposed rate was set at 85% of the Metropolitan Water District of Southern California’s untreated Tier 1 rate. Following approval, IEUA will design and construct the recycled water system through reimbursement from Speedway and CSI. Speedway has the option to pay for connection fees, wastewater capital and recycled water capital costs by assigning pumping rights to IEUA. The duration of these agreements is sixty years. Following a detailed review, a categorical exemption from the California Environmental Quality Act (CEQA) has been adopted since the activities related to this agreement do not have any significant effect on the environment.

This project meets the Agency’s Environmental Stewardship Goal through the implementation of actions that enhance or promote environmental sustainability, and the Water Reliability Business Goal in maximizing the beneficial reuse of recycled water to enhance reliability and reduce dependence on imported water.

**PRIOR BOARD ACTION**

None.

**IMPACT ON BUDGET**

If approved, the amount required to fund the project is included in the FY2015/16 Recycled Water Capital (WC) Fund budget under Project No. WR15021, “Napa Lateral”.

Questions?
 Date: September 24/October 1, 2015
To: Regional Committees
From: Inland Empire Utilities Agency
Subject: Energy Management Plan

**RECOMMENDATION**

This is an Informational Item for the Regional Committee to review.

**BACKGROUND**

This item will be presented at the IEUA Board of Directors meeting on December 16, 2015.
Energy Management Plan (EMP)
EMP Overview

- Benchmark Current Performance
- Peak Power Independence Status
- Optimize Resources
- Improve Demand Side Management
- Forecast Facility Demands
- Mitigate Greenhouse Gas Impacts
- Identify Potential Energy Projects
- Track Energy Regulations
- Qualify for State/Federal Grants
Energy Benchmarking

Electricity Usage (MWh)

- IEUA Facilities
- RW/GWR

Graph showing electricity usage from 2007/08 to 2013/14.
Peak Power Benchmarking

[Bar chart showing power demand (kW) from January to June, with a breakdown of contributions from ICE, Wind, Fuel Cell, Solar, and Average Agency Peak Demand. The y-axis represents the months, and the x-axis represents the power demand in kW.]
GHG Benchmarking

<td>33,506</td>
<td>36.1%</td>
</tr>
</tbody>
</table>

- Registered Member of The Climate Registry
  - Annual voluntary reporting of GHG emissions
  - Verification by end of 2015
    - To qualify for Cap-and Trade funding
  - Establish current carbon footprint and track improvements
Facility Assessments

- Available Resources
  - On-site renewables
  - Digester gas production
- Facility Load
  - Seasonal variation
- Electricity Procurement Strategy
- Demand Response Capabilities
- 20-Year Energy Forecast
- Project Opportunities
## Short-Term Goals

Forecasting Demands

Information from TYCIP, WFMPs, Short-Term and Long-Term Goals

SUMMER PEAK DEMAND

FISCAL YEAR

- Power Demand
- Power Reductions
- Solar
- Wind
- Fuel Cell
- ICE
- Microturbine
Current planning efforts expected to achieve 84% neutrality
- Combination of efficiency measures and new renewable
- Future EMPs to identify opportunities to bridge gap

2013
- Non-Carbon Neutral Sources: 64%
- Imported (Renewable): 16%
- Solar: 8%
- Wind: 1%
- Biogas (Fuel Cell, IC Engine): 11%

2030 Projected
- Non-Carbon Neutral Sources: 64%
- Imported (Renewable): 21%
- Solar: 15%
- Wind: 1%
- Biogas (Fuel Cell, Microturbine, IC Engine): 47%
- To Be Determined: 16%

36% Neutral
100% Neutral
Policy Tracking

- Partner with Organizations that Track, Impact Regulations
- Incorporate Anticipated Policy Changes into Analysis
  - Pavley SB 471
  - Air Resource Board Short Lived Climate Pollutants
  - CPUC Water/Energy Cost Calculator
  - Duck Curve

![Graph showing net load for March 31](chart.png)
Recent Efforts

- Energy Audits Completed and Efficiency Measures Identified
  - Lighting retrofit to begin in Fall 2015
  - Pump optimization to begin in Fall 2015
- Energy Storage Agreement in development
  - RP-5 installation to be completed by end of 2015
- Microturbine Project Under Evaluation
Next Steps

- Implement Goals and Strategies Identified
- Complete Programmatic EIR – Summer 2016
- Update the EMP every two years – 2017

This project meets the Agency’s Business Goal of Energy Management and Wastewater Management by optimizing facility energy use and effectively managing renewable resources.

• Inter-Agency Partnering Program
• Online Voucher Program launched: FY 2010-11
• Target Market:
  ▪ Residential, Commercial, and Landscape Customers
• Phase VI Program (FY 2015-16)
  ▪ Program Expansion – New nozzles (Toro, Hunter, Rainbird – CI Only)
  ▪ 48,750 High Efficiency Nozzles (Redeemed at $5 per unit)
  ▪ Annual Projected Water Savings: 974 AF
  ▪ Lifetime Water Savings: 4,870 AF (over 5 years)
  ▪ MWD Reimbursement $182,812.50 (75%)
  ▪ Non-Reimbursable: $60,937.50 (25%)
Consistent with Agency’s Business Goal of increasing Water Reliability by promoting water use efficiency and education to enhance water supplies within the region

RECOMMENDATION

This is an information item for the Regional Technical Committee to review.

BACKGROUND

The item was presented as an informational item at the IEUA Board of Directors meeting on September 2, 2015.
RECOMMENDATION

This is an informational item for the Board of Directors to review.

BACKGROUND

An important element of long term financial planning is identifying and planning for potential changes in economic or environmental conditions that may negatively impact the Agency’s financial stability. The focus of this workshop is to “stress test” the Agency’s financial strength against various scenarios over the next ten fiscal years (FYs) 2015/16 through 2024/25.

The following sections present the stress testing of the Agency’s long term financial plan with different scenarios and assumptions. The adopted Biennial Budget and Ten Year Capital Improvement Plan (TYCIP) serves as the “Baseline” for comparing three different scenarios that highlight significant changes in some of the Agency’s major funding sources. For each scenario, the fiscal impact on the Agency’s program fund reserves and total debt coverage ratio is identified, along with some of the potential remedies for recovering the projected funding shortfalls.

The key objective of the remedies is to bring fund reserves to the Baseline level by FY 2024/25. Restoring reserve levels is essential to ensure adequate funding is available for the rehabilitation of Regional Recycling Water Plant No. 1 (RP-1) and the future decommission of the Regional Plan No. 2 (RP-2). Preliminary estimates indicate costs for these two projects to be over $200 million.
Baseline: FY 2015/16-2016/17 Biennial Budget and FYs 2016-2025 TYCIP

The adopted FYs 2015/16 & 2016/17 Biennial Budget and the FYs 2015/16 – 2024/25 TYCIP demonstrates the IEUA Board and staff's steadfastness to deliver high quality and reliable services to its customers in a regionally planned, cost-effective manner, consistent with the IEUA Business Goals. The adoption of five-year rates that achieve full cost of service for the Agency’s Regional Wastewater and Recycled Water programs and implementation of a new water connection fee provide the Agency and its member agencies a stable financial plan to more effectively meet the committed level of service.

The Baseline scenario supports the following key Agency business goals of Fiscal Responsibility and Strategic Plan:

- Full Cost Recovery - Achieve full cost of service recovery as demonstrated in the adoption of five year rates for monthly volumetric EDUs, Wastewater and new Water Connection Fees, and Recycled Water rates. The approved 5 year rates and the estimated rates for to build the ten year forecast are included in Appendix A.
- Financing Strategy - Leveraging the low interest rate state loans and grants to support the TYCIP and early retirement of the 2008A Revenue Bonds (2008A Bonds) beginning FY 2017/18 to leverage savings of approximately $60 million in avoided interest costs.

A summary of the major funding sources and uses of funds included in the Baseline scenario are listed in Table 1:
Table 1: Baseline Major Funding Sources and Uses of Funds FYs 2016-2025

</tr>
</tbody>
</table>

Over the next ten years, a combination of multi-year rates, continual steady growth in property tax receipts, and stronger pace in new development resulting in a higher number of new wastewater and water connections, help to improve the Agency’s reserve balances and debt coverage ratios (DCR), as indicated in Figure 1 and Table 2 below.

**Figure 1: Baseline Projected Reserve Balance**

Included in the Baseline is the early retirement of the 2008A Bonds beginning in FY 2017/18 through FY2021/22. Reserve balances start to ramp up starting in FY 2022/23 and DCR remains favorably above the Fitch AA credit rating medium of 1.90x. In August 2015 Standard and Poor’s upgraded the Agency’s long term credit rating from AA- to AA. The enhanced credit rating will help the Agency secure lower cost financing in the future.

</tbody>
</table>

O&M and TYCIP Costs

In the following three scenario analysis, no changes in either operations and maintenance (O&M) expenses or TYCIP expenditures are assumed as part of the potential remedies. As indicated in the adopted Biennial Budget, the Agency has been effectively adhering to a Cost Containment Plan since FY 2008/09 in response to the economic downturn of 2008. Through the deferral of non-critical projects, diligent budget monitoring, and maintaining an assertive vacancy factor well above the budgeted rate; the Agency has achieved estimated cumulative cost savings of $245 million through FY 2012/13. This reduced O&M expense level is the basis for the adopted Biennial Budget.

Projects included in the TYCIP align with the facility and infrastructure rehabilitation needs as identified in the Agency’s Asset Management Plan (AMP), as well as expansion projects needed to meet anticipated growth, primarily in the southern sector of Agency’s the service area, as identified in the recently updated Wastewater Facilities Master Plan.

Nevertheless, in the event the Agency is faced with a significant loss of revenue, a more comprehensive analysis will be undertaken to examine all potential remedies to safeguard the Agency’s financial viability, including deferral of non-critical projects and additional temporary reductions in O&M costs.

Scenario 1: 50% reduction in growth beginning FY 2015/16

In recent years, improvement in the economy has begun to revitalize new development across IEUA’s service area, as exemplified by the member agencies’ projection of 40,523 new connections over the next 10 fiscal years. Based on actual historical trends, the Agency’s ten year forecast is more conservative at 30,000 new connections through FY 2024/25.

Scenario 1 assumes an economic downturn which results in a slowdown in new development and a reduction of 50% in the number of new connections for both wastewater and water over the Agency’s ten year forecast.

As we recall, the great recession of 2008 significantly impacted the Inland Empire region, bringing new development to almost a complete halt. The number of new wastewater connections tumbled to a low of 1,116 units in 2011. Property values also fell by over 6% in 2010 and 2011, decreasing the Agency’s property tax receipts from $36 million in 2009 to $32 million in 2012. As illustrated in Figure 2, the number of new connections declined to a very
low level for four years after 2008. Average annual connection fees revenue between FY 2003/04 to FY 2006/07 of $25 million significantly dropped to $7 million annual average between FY 2008/09 to FY 2011/12.

![Figure 2: Historical Actual EDU Connection](image)

**Figure 2 : Historical Actual EDU Connection**

FY 2003/04 to FY 2014/15

---

**Fiscal Impact**

A 50% reduction in the number of new connections (total drop of 15,000 EDUs for wastewater connections and 12,118 MEUs for water connections over the ten year period) equals a loss of approximately $123 million in new wastewater and water connection fees based on the current multi-year adopted rates and future projected rates increasing by inflation (Baseline rates). The loss of connection fee revenue will adversely impact all of the Agency’s program funds reserves, including minor funds such as, the Non-Reclaimable Wastewater (NRW), Administrative Service (GG), and the Water Resources (WW) funds which also receive a portion of wastewater connection fees from Regional Wastewater Capital (RC) fund and water connection fees from the Recycled Water (WC) fund. Under this scenario the allocation of connection fees will be cut in half, as reported in Table 3.

<tr>
<td>50% reduction in connection fees</td>
</tr>
<tr>
<td>Adjusted ending fund balance</td>
</tr>
<tr>
<td>Minimum fund balance</td>
</tr>
</tbody>
</table>

*Other minor funds include Non-Reclaimable Wastewater (NRW) and Administrative Service (GG) funds.

As reported in Table 4, the most significant impact to total DCR is projected in FY 2015/16. Thereafter, the total DCR is projected to trend upward as revenues from service charges and recycled water sales increase due to a combination of higher volumes and the adopted multi-year rates.
Potential remedies

As aforementioned, no reduction in the adopted TYCIP or O&M costs is assumed. Since, rehabilitation and replacement (R&R) and expansion and improvement are the key drivers for the majority of the projects, deferral of some of these critical projects may not be feasible. For example, with pre-design of the RP-5 expansion already underway, even if the pace of new development is slower than anticipated, halting the project may not be possible (e.g. construction is in progress), or make economic sense if construction costs also decline, as seen in prior economic downturns.

Also included in this scenario is the early retirement of the 2008A Bonds beginning FY 2017/18 through FY 2021/22. Annual payments of $25 million over this five year period will effectively retire $125 million in high interest (5%) outstanding debt resulting in approximately $60 million in avoided interest costs. Assuming no changes to the adopted TYCIP or O&M budget, to mitigate the 50% reduction in the number of new connections, the following remedies, or some combination, may be considered to recover the estimated shortfall in connection fees;

- Grant receipts – only $39 million in grant receipts over the next ten years is included in the adopted Biennial Budget and ensuring year forecasts; a very conservative estimate. The Agency will actively pursue all grant opportunities available to support projects included in the TYCIP. Any grant receipts above the budgeted amount of $39 million will help to offset the impact to additional rate increases or demand deficit capital calls.
• Higher wastewater connection fees – additional annual rate increase of $6,000 to $9,000 per EDU beginning FY 2017/18 to recover approximately $75 million to support critical expansion of the system. Grant receipts above the $39 million forecast will reduce the estimated increase.

Table 5: Scenario 1 Wastewater Connection Fees Additional Rate Increase

<table>

<th>1,132</th>
<th>1,131</th>
<th>1,131</th>
<th>530</th>
<th>15,000</th>
</tr>
</thead>
</table>

• Higher water connection fees - additional annual rate increase of $1,900 to $2,400 per MEU starting in FY 2017/18 to recover approximately $20 million to support planned enhancement and expansion of the distribution and groundwater recharge facilities. Grant receipts above the $39 million forecast will reduce the estimated increase.

</table>

• Surcharge on the monthly volumetric EDU rate – a surcharge of approximately $2 per EDU will be added to recover approximately $19 million in reduced connections fees. The surcharge will fund the relocation of the RP-2 solids handling facility to the RP-5 site, and rehabilitation of the RP-1 facility. Grant receipts above the $39 million forecast will reduce the estimated surcharge.

• Demand deficit call – possible capital call from member agencies to support critical construction projects. Under the Regional Sewage Service Contract (Section E6 Capital Capacity Reimbursement Account (CCRA) and Allocation of Supplemental Capital Outlay Fund Shortages), if CCRA funds are not sufficient to support capital requirements, the Agency can demand member agencies pay the full amount required based on the proportionate share of CCRA balances. Use of a demand deficit will reduce the increase to new wastewater connections and lessen the impact on new development. Grant receipts above the $39 million forecast will reduce the estimated call.

Under Scenario 1, both the fund reserve level and total DCR are restored to Baseline levels, as shown in Table 8 and 9.

Scenario 2: 100% shift of property taxes by the State beginning FY 2018/19

Property tax receipts are one of the Agency’s key revenue sources supporting the Agency’s capital improvement plan (CIP) and debt service costs. However, property taxes can also be the most uncertain given the State’s past actions in shifting property taxes and other local agency revenue to meet budget deficits. Although the State’s current financial position has greatly improved and legislation is now in place to safeguard local agency revenues; property tax allocations to enterprise special districts remain vulnerable.

Under this scenario a shift of 100% property taxes is assumed beginning FY 2018/19 when the temporary state tax increases approved under Proposition 30 are set to expire and the next cyclical economic downturn may possibly occur. Together, these can negatively impact the State’s fiscal position. This scenario only considers the loss of approximately $331 million in property taxes through FY 2024/25 and not the compounding impact of an economic downturn to other major funding sources, such as new connection fees. No changes to the Agency’s adopted TYCIP and O&M budget are also included. The only exception is the early retirement of the $125 million 2008A Bonds that will be included as one of the potential remedies to mitigate the estimated loss.

Fiscal Impact
As reported in Table 10, the Agency funds with the highest allocation of property taxes are the hardest hit under this scenario.

**Table 10: Estimated Loss of Property Taxes by Fund through FY 2014/15**

*Other minor funds include Non-Reclaiamable Wastewater (NRW) and Administrative Service (GG) funds.

Shortfall in property tax receipts will disrupt the financial strategy of the Regional Wastewater program aimed at building reserves to fund future major capital projects not supported by connections fees, including the rehabilitation the Agency’s oldest facility (RP-1) scheduled to begin around 2025, and the ultimate decommissioning of the RP-2 solids handling facility prior the expiration of the site lease in 2035.
Figure 4: Scenario 2 Impact on Reserve Balance (without remedies)

The assumed property tax shift also propels the total DCR downward to a low of 0.90x in FY 2024/25; significantly below the minimum requirement, as illustrated on Table 12.

</tbody>
</table>

Potential remedies

To recover the estimated loss of $331 million in property taxes, a few alternatives can be explored to remedy the negative impact to the Regional Wastewater and Recycled water programs:

- Grant receipts – only $39 million in grant receipts over the next ten years is included in the adopted Biennial Budget and ensuring year forecasts; a very conservative estimate. The Agency will actively pursue all grant opportunities available to support projects included in the TYCIP. Any grant receipts above the budgeted amount of $39 million will help to offset the impact to additional rate increases or demand deficit capital calls.

- No early repayment of the $125 million 2008A Bonds will provide favorable cash flow of approximately $88 (net of ongoing annual debt service costs). Grant receipts above the $39 million forecast may allow for the early retirement of a portion of the outstanding amount.
Higher wastewater connection fees – additional annual rate increase of $4,500 to $8,000 per EDU beginning FY 2018/19 to recover approximately $103 million to support critical expansion capital projects. Grant receipts above the $39 million forecast will reduce the estimated increase.

Table 13: Scenario 2 Wastewater Connection Fees Additional Rate Increase

</tbody>
</table>

Demand deficit call – possible capital call from member agencies to support critical construction projects. Under the Regional Sewage Service Contract (Section E6 Capital Capacity Reimbursement Account (CCRA) and Allocation of Supplemental Capital Outlay Fund Shortages), if CCRA funds are not sufficient to support capital requirements, the Agency can demand member agencies pay the full amount required based on the proportionate share of CCRA balances. Use of a demand deficit will reduce the increase to new wastewater connections and lessen the impact on new development. Grant receipts above the $39 million forecast will reduce the estimated call.

Increase the Monthly Volumetric EDU rate – additional rate from $0.81 to $9.16 per EDU annually starting in FY 2018/19 to recover approximately $122 million to support capital R&R requirements. Assuming no change in the volumetric EDU based on conservative growth forecast, estimated surcharge rate reaches $31.00 per EDU by FY 2024/25 (Table 11). Grant receipts above the $39 million forecast will reduce the estimated increase.

Increase the Water (meter unit equivalent) rates - an additional increase of $0.50 per meter unit equivalent (MEU) will help to generate $23 million for recovering the loss of $11 million in property tax shift while maintaining the minimum reserve balance. Grant receipts above the $39 million forecast will reduce the estimated increase.

Table 15: Scenario 2 Volumetric MEU Surcharges

*Other minor funds include Non-Reclaimable Wastewater (NRW) and Administrative Service (GS) funds.*

By eliminating the early retirement of the 2008A Bonds, the DCR shows a steady favorable trend above 3.0x from FY 2016/17. The DCR begins to drop in FY 2023/24 when principal payments for the 2008 Bonds and repayment of future SRF loans begin.

Scenario 3: 50% reduction in growth and 50% reduction in property taxes

**Assumptions**

As aforementioned, the 2008 economic downturn negatively impacted the Agency’s property tax receipts and new wastewater connection fees. Under this scenario we stress test the potential reduction of these two major revenue sources should another economic downturn occur during the next decade.

A 50% shift in property tax receipts by State is assumed beginning in FY 2018/19. This aligns with the expiration of the temporary state tax increases approved under Proposition 30. Additionally, a 50% reduction in the number of new connections for both wastewater and water
is assumed from the slowdown in new development as a result of an economic downturn. The result is a combined shortfall of approximately $289 million; $166 million in property taxes and $123 million connection fees.

*Other minor funds include Non-Reclaimable Wastewater (NRW) and Administrative Service (GG) funds.

Due to the estimated loss of $289 million in revenue, one of the potential remedies included in this scenario is the cancellation of early repayment of the 2008A Bonds. Under this scenario annual debt service costs for the 2008A Bonds will be limited to only interest payments of $6.25 million until principal payments begin in FY 2023/24. Elimination of the early repayment option will result in higher estimated fund balances of approximately $88 million by FY 204/25. However, approximately $60 million in avoided interest costs will not be realized. As principal payments begin in 2024, fund balances will be reduced along with total DCR. As indicated in Table 19, the DCR under this scenario begins to decline in FY 2023/24 when repayment of future debt borrowings are scheduled to begin, and principal payments against the 2008A Bonds continue through 2039.

Potential remedies

Since the assumed revenue loss is primarily in property taxes and connection fees, the most probable remedies include:

- Grant receipts – only $39 million in grant receipts over the next ten years is included in the adopted Biennial Budget and ensuring year forecasts; a very conservative estimate. The Agency will actively pursue all grant opportunities available to support projects included in the TYCIP. Any grant receipts above the budgeted amount of $39 million will help to offset the impact to additional rate increases or demand deficit capital calls.

- No early repayment of the $125 million 2008A Bonds will provide favorable cash flow of approximately $88 (net of ongoing annual debt service costs). Grant receipts above the $39 million forecast may allow for the early retirement of a portion of the outstanding amount.

- Higher wastewater connection fees – additional annual rate increase of $6,500 to $8,000 per EDU beginning FY 2017/18 to recover approximately $59 million to support future expansion of the system. Grant receipts above the $39 million forecast will reduce the estimated increase.

requirements, the Agency can demand member agencies pay the full amount required based on the proportionate share of CCRA balances. Use of a demand deficit will reduce the increase to new wastewater connections and lessen the impact on new development. Grant receipts above the $39 million forecast will reduce the estimated call.

- Monthly Volumetric EDU rate — additional increase of $0.81 to $9.16 per EDU each year from FY 2020/21 to FY 2024/25 will be necessary and the rate will reach $31.2 per EDU by FY 2024/25 (Table 21) to recover approximately $122 million from the 50% loss in property taxes. Grant receipts above the $39 million forecast will reduce the estimated increase.

- Higher recycled water rates — additional annual increase of $20 per acre foot starting in FY 2018/19 to recover approximately $6.5 million from the loss of 50% in water connection fees. Grant receipts above the $39 million forecast will reduce the estimated increase.

The early repayment of the $125 million high interest (5%) 2008 Revenue Bonds is one of the key drivers for the estimated fund balance and total DCR in scenario 2 and 3. However, changes in this debt financing strategy warrant more in-depth analysis and discussion to ensure all of the factors are carefully considered, including the loss of $60 million in avoided interest costs and future debt capacity to secure low cost borrowing for the expansion of the RP-5 and RP-2 facilities.

Another alternative to be considered is refinancing the 2008A Bonds to take advantage of a lower interest rate. Although the savings are estimated to be significantly less, between $7 million to $8 million over ten years, compared to the $60 million earned from early retirement; the net cash outlay of $88 million would be avoided over the next 10 years. Staff will continue to work with the Agency’s financial advisor to evaluate the most appropriate strategy given the planned capital investment over the next 20 years.

Closing

A key emphasis of this budget workshop is the evaluation of the adverse scenarios that would impact the Agency’s financial sustainability to support various programs expenditures, operating costs, CIP and debt service costs. The remedies highlighted in the various scenarios are intended only as a “broad brush stroke” approach. Should any of these adverse conditions arise, or other unexpected changes that may negatively impact the Agency’s fiscal health, a more comprehensive analysis and discussion will be conducted to ensure all of the risks and benefits are carefully considered.

The Agency is currently working with member agencies and water stakeholders to complete the Integrated Water Resources Plan (IRP). This plan is a major step in defining the components to build a more resilient and sustainable regional water supply. In addition, development of an Energy Management Plan (EMP) is underway and the restructuring of potable water rates is also in progress. Upon the completion of the initiatives, staff will incorporate cost projections, funding options and respective timelines into the long range financial plan analysis. A workshop will be facilitated in early 2016 to present an update of long term funding and commitments, along with a re-evaluation of the Agency’s financial policies.
