

Recycled Water Bracelets

5th-12th Grade

Activity Fact Sheet

Objective

To develop an understanding of the recycled water process and to establish an appreciation of recycled water.

Overview

Students will participate in a discussion on where water comes from, how water travels, water treatment plants, and the importance of recycled water. Students will assemble bracelets with color beads that represents the different stages of water in the treatment process. Students will be able to keep their bracelets as a reminder of the recycled water process.

Note: This activity correlates with the Wastewater Treatment Plant Video & Scale Model.

Length of Time

20-30 minutes
